NATIONAL & INTERNATIONAL

As world leaders pledge action to arrest a climate catastrophe, the nuclear industry sees an opportunity. Nuclear power is the second-largest source of low-carbon electricity generation in the world, but amid a new generation of nuclear reactors, some are smaller and cheaper than older designs, which could help the industry's prospects in the United States and Europe. Nuclear power could also help countries that are [banking](https://www.nytimes.com/2021/11/01/business/energy-environment/nuclear-power-climate-change.html) on a fast rise of "mass decarbonization" for the United States.

• https://www.nytimes.com/

The Department of Interior recommended higher fees for oil and gas leases, but there was no immediate indication that the Biden administration would follow through on the proposal when weighing the [recommendations](https://www.nytimes.com/2021/11/01/climate/biden-oil-gas-leases.html).

• https://www.nytimes.com/

Transmission line to Alaska injected the $1.2 trillion infrastructure bill, which includes funding for grid projects, with a political debate. Senator Lisa Murkowski [opposed the underlying policy](https://www.nytimes.com/2021/11/01/climate/alaska-power-line-infrastructure-bill.html) crafting the administration's priorities for implementing the law and setting up a task force to oversee the process, which includes Alaska.

• https://www.nytimes.com/

A $15 billion boosting fund to establish USB as an anchor tenant for new or upgraded satellites. Initial capital providers include Apollo Global Management, Ares Management, Blackstone Inc. and Carlyle Group.

• https://www.bloomberg.com/

The Environmental Protection Agency intends to limit the substances from roughly two dozen existing and yet-to-be-built power plants in the United States. The [proposal](https://www.nytimes.com/2021/11/01/climate/epa-power-plants-carbon-capture.html) would require the use of carbon capture technology to reduce emissions, a process scientists have long championed and yet rarely built since 2010.

• https://www.nytimes.com/

Brazil's government is on track to meet its commitment to end illegal deforestation by 2028 a year later. Environment Minister Joaquim Leite said Brazil's 2021 rate would exceed 10,000 square kilometers (3900 square miles) of deforestation in over a decade, [AP notes](https://apnews.com/article/climate-business-environment-and-nature-brazil-deforestation-2ed1e1e1e1e1e1e1e1e1e1e1e1e1e1e1).

• https://apnews.com/

Australia's government has refused to sign a global pledge to end coal mining. Prime Minister Scott [Morrison](https://www.nytimes.com/2021/11/02/world/australia/australia-coal-climate-change.html) said Australia was a proponent of the Climate Governance & Finance Initiative, a network of environmental campaigners, to set

• https://www.nytimes.com/

The Glasgow Climate Pact is a step forward, researchers say, but efforts to decarbonize are not enough to limit planet temperature rises to 1.5 °C.

• https://www.nytimes.com/

Unsustainable carbon dioxide from the ground

• https://www.nytimes.com/

Unsustainable carbon (mainly fuels per hectare)

• https://www.nytimes.com/

Global temperature change(°C) from 1750 – double the warming we've seen so far, which the world is on course to hit, would produce more than double an increase in the severity of [extreme weather](https://www.nytimes.com/2021/11/03/climate/climate-change-extreme-weather.html) events, a new study has found.

New CSIRO research projects that under unconstrained climate change, Australia could be a net exporter of the future. Australia's [Chief Scientist](https://www.nytimes.com/2021/11/03/world/australia/australia-climate-change-exports.html) Dr Tanya Hart commented: "In the future, we could be a net exporter of solar energy, hydrogen and critical minerals, and a net importer of food and water."

• https://www.nytimes.com/

The Glasgow Climate Pact is a step forward, researchers say, but efforts to decarbonize are not enough to limit planet temperature rises to 1.5 °C.

• https://www.nytimes.com/

Global temperatures in recent years have topped average [nearly 1.2 degrees Celsius](https://www.nytimes.com/2021/11/03/climate/climate-change-extreme-weather.html) (1.9 degrees Fahrenheit) higher than that of 1850 to 1900, the period scientists typically use to measure [warming](https://www.nytimes.com/2021/11/03/climate/climate-change-extreme-weather.html) without human-induced change, and is expected to rise every year before that predicts such heat could now be a [once-in-a-century event](https://www.nytimes.com/2021/11/03/climate/climate-change-extreme-weather.html) by the 2050s, and a once-in-a-decade event by the 2100s.

• https://www.washingtonpost.com/

RENEWABLE ENERGY

Reducing methane leaks across emissions 50% over the next eight years will require a significant acceleration of methane mitigation industries and policies – and a [new report](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) from the International Energy Agency has identified 50 actions governments can take.

To sustain the growth in demand with the expansion of deployment of new and solar generation has to [increase](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) by a factor of 10 over the next decade, the International Energy Agency said in a report.

Solar **U.S. solar-thermal specialist Parlex is to build a 1.5 MW concentrated solar power facility** for industrial steam and [heat](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) loading. The system includes a 1.5 MW steam turbine and 1.5 MW of thermal energy storage.

• https://www.pv-magazine.com/

Taiwanese market research company [PV InfoLink](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) has forecasted that global solar module demand will grow by 4% next year to 230 GW. That price level is still three times higher than the [2020 price](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) level.

• https://www.pv-magazine.com/

It is estimated that there will be 79 million tonnes of [total waste by 2050](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html). This results in nearly 7 **billion panels.** One major [design](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) flaw is that no land is "dirty" long-term, leaving little option but to [recycle](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) or dispose of panels in landfills. Solar panels can be made from a variety of [materials](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) and the most common are silicon, cadmium telluride, copper indium gallium diselenide, gallium arsenide and [organic](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) materials.

• https://www.pv-magazine.com/

Due to inconsistent installation practices, intense manufacturer competition, and [unsustainable](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) business models, the solar industry has a reputation for poor quality and short lifespans.

Based on a number of [examples](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) of commercial solar projects operating for 30 years or more, the report's authors argue that solar panels can last for [decades](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) if they are built and installed correctly.

• https://www.pv-magazine.com/

Developers say industrial-scale farms are needed to meet the nation's climate goals, but [residents](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) in rural areas are pushing back against the loss of farmland and scenic views.

• https://www.nytimes.com/

At first glance, putting solar cells on a fence would seem to be a bad idea. As the panels [intercept](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) sunlight that would otherwise reach the ground, they would cut down the amount of crops that could grow. But the panels would also shield the plants from the heat of the summer sun, and they would require less water to [irrigate](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) the crops. Now, a study in the Proceedings of the National Academy of Sciences has found that this [seemingly](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) counterintuitive approach can actually increase the overall productivity of the land.

• https://www.nytimes.com/

Energy Storage **Pumped-hydro research, primarily in chemistry and materials science,** has been [underway](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) at the Department of Energy's Pacific Northwest National Laboratory since 2018. Researchers at the Massachusetts Institute of Technology (MIT) [calculated](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) that there are more than 50,000 sites around the world.

Lithium-ion batteries with recycled cathodes can outperform batteries made from pristine [materials](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html), according to a study published in Nature Communications. The batteries with recycled cathodes also [showed](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) a slower rate of capacity loss.

• https://www.nytimes.com/

By the end of 2030, 17.6 GWh of lithium-ion batteries will [meet](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) their end of life, by 2030, that [number](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) will grow to over 100 GWh, according to a new report. Solar panels will [need](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) to meet this target growth in demand.

Forecast for natural GW and PWH Capacity

• https://www.nytimes.com/

Wind **Orsted Hornsea Project One** is now fully operational, the company announced. The project is [capable](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) of generating enough electricity to power more than 1 million homes and businesses in the United Kingdom.

• https://www.nytimes.com/

Green Hydrogen **Plug Power** has [partnered](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) with Bord Gais Energy to develop a green hydrogen production facility in Ireland. The project is [expected](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) to be operational by 2023.

• https://www.nytimes.com/

Fuel Cells **Toyota Motor North America** [expanded](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) its fuel cell business to include heavy-duty trucks. The company [announced](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) that it will begin testing a fuel cell electric Class 8 truck in California.

• https://www.nytimes.com/

NORTH-EAST

A **NLS PAR Farmington solar project in Maine has entered service and will supply power to Hannaford Supermarkets.** The project is [one of several](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) solar projects in the state's pipeline.

• https://pv-magazine-usa.com/

New York

New York's first [offshore](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) wind farm has separate electrical grids update, where most of the state's electricity is generated upstate, and most of the demand is downstate. The state has [struggled](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) to move enough clean energy and miles north-south to power from fossil fuels. The power lines that connect the two [regions](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) are often overloaded.

Con Ed's proposed plan to build a new transmission line to bring clean energy to New York City [faces](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) fierce opposition from residents, including doubling the state's solar energy expansion goal and creating a [renewable](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) energy hub in the Hudson Valley.

The Biden administration approved plans for a 130-megawatt South Fork Wind project, in which the state has a sought power purchase agreement, the first offshore wind farm to serve the Washington Post states.

Under the new plan, turbines would blades transit [across a major](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) way in the administration's part of the Hudson River, [requiring](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) the bridge to be raised for the passage, a process that takes more than 10 million homes. The project has received some offshore wind farm approved by the Interior [Department](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) since the Trump administration, and [is under construction](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) off the coast of Rhode Island.

• https://www.eenews.net/

New York

Governor Kathy Hochul announced the creation of the Environmental Justice Council during a Tribal Nations Summit in the Tuscarora Nation. The [council](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) will oversee the New York's Climate Leadership and Community Protection Act (Climate Act) [implementation](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) to ensure that 35 percent of the benefits from clean energy and climate investments flow to disadvantaged communities.

Governor Hochul announced the Northern New York Energy Initiative to [support](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) projects that there are no commercially available source of [fuel.](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) Port: Green Hydrogen]

• https://www.governor.ny.gov/news/governor-hochul-announces-northern-new-york-energy-initiative

Maine

Maine's state's capacity for generating low-polluting electricity from the sun has surged in the last two years by more than 50%, and it could [be expected](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) to grow as the state moves closer to its clean energy goals.

• https://www.mainepublic.org/eye-

Massachusetts

The solar industry is worrying that a long-delayed expansion of Massachusetts' small-scale solar incentive program could [stall](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) out the state's booming solar industry.

• https://www.wbur.org/news

Massachusetts is joining a set of a multi-state consortium to reduce carbon emissions from the transportation sector. Gov. Baker had long touted the Transportation Climate Initiative (TCI) as the [best](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) way to reduce emissions from the sector, which is the largest source of carbon pollution in the state.

• https://www.eenews.net/

Massachusetts Department of Transportation is developing a pilot project, jointly with the private sector partnerships, to put solar panels on a half-mile stretch of sound barriers on Interstate 93 in Boston. The project is [expected](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) to generate enough electricity to power about 200 homes and will be completed by the end of next year, the [governor](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) said at the event.

• https://apnews.com/

Rhode Island

Rhode Island has [launched](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) a six-month lease on all three ground-mounted solar installations. The [lease](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) will be used to power 1,200 state buildings, including the Statehouse and correctional facilities.

• https://www.wpri.com/

Vermont

Vermont's Solar, as part of its Community Chapter Group, announced the start of construction on a 2.4 MW community solar project in Lyndon. The [project](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) will be developed by Lyndon Electric Department.

DATA

From the US Energy Information Agency (EIA) Forecasts:

Over the past decade, major utilities in the United States have been spending more on [electricity](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) transmission and distribution infrastructure than on power plants.

Solar generation was 3% of U.S. electricity in 2020, but we project it will be 20% by 2050 [Source: EIA]

U.S. electric power sector added 14.6 gigawatts (GW) of new wind capacity in 2020. EIA expects that wind capacity will grow by 15% in 2021 and by 12% in 2022. Wind capacity is projected to grow by an annual rate of 6% between 2022 and 2050. Solar capacity is projected to grow by an annual rate of 10% between 2022 and 2050. Natural gas capacity is projected to grow by an annual rate of 0.2% during the forecast period. In addition, after increasing by 4.3 GW for 2017 to 2020, coal is projected to decrease by 0.2 GW between 2020 and 2050. [Source: EIA]

PJM's latest monthly "Energy Infrastructure Update" report (with calendar-year data through October) shows that 2021 is on track to be a record year for new generation capacity. Through October, 5,000 MW of new capacity has come online in the PJM region, and another 5,000 MW is expected to be added by the end of December. Natural gas-fired generation accounts for 3,800 MW of the total, while solar generation adds 38.8% higher than where it was at this time last year. There were also small increases in nuclear generation (+0.2%) and wind (+0.1%), while coal generation fell (-0.1%).

PJM's latest monthly "Energy Infrastructure Update" report (with calendar-year data through October) shows that 2021 is on track to be a record year for new generation capacity. Through October, 5,000 MW of new capacity has come online in the PJM region, and another 5,000 MW is expected to be added by the end of December. Natural gas-fired generation accounts for 3,800 MW of the total, while solar generation adds 38.8% higher than where it was at this time last year. There were also small increases in nuclear generation (+0.2%) and wind (+0.1%), while coal generation fell (-0.1%).

Solar is the fastest-growing source of summer (25.9%) of total U.S. available installed generating capacity in 2021, followed by natural gas (24.7%) and wind (23.7%). Solar is also the fastest-growing source of new capacity additions in the Journal Nature Energy.

A new Wood Mackenzie Solar Power and Energy Storage Cost Benchmarks Q3 2021 from the Solar Energy Industries Association (SEIA) and Wood Mackenzie finds that:

• Costs decline for residential, commercial, and rooftop solar with PV systems — 7% to 17%, and utility-scale solar down 4%.

• Decline of 11.6% in utility storage, 9.68% in residential storage systems, and 9% in commercial.

• https://www.seia.org/

OPINION

The recent dramatic decline in battery prices has created a new possibility for [electricity](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) storage. Batteries can [provide](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) backup power when the wind doesn't blow and the sun doesn't shine, and they can help [stabilize](https://www.nytimes.com/2021/11/02/climate/methane-emissions-report.html) the grid by responding to changes in demand.

Subscribe Past Issues Translate ▼ RSS

a diesel-electric train. Their analysis shows that existing battery technology could power a freight train for 150 miles (the average daily distance traveled). A battery-powered freight train would use half the energy required by a diesel-electric train.

- https://phys.org/news/

A 'macrogrid' that increases the electricity moving between America's Eastern and Western interconnections, two of the biggest power grids on the planet, would more than pay for itself, according to new research.

Two of the biggest power grids on the planet are connected by seven small threads. They join America's Eastern and Western interconnections and have 1,320 megawatts of electric-power handling capacity.

Two papers by University of Iowa researchers published this summer and fall by IEEE, the Institute of Electrical and Electronics Engineers." Show benefit-to-cost ratios that reach as high as 2.5, indicating significant value to increasing the transmission capacity between the interconnections under the cases considered, realized through sharing generation resources and flexibility across regions."

- https://www.sciencedaily.com/

One billion people could access safe drinking water using devices that use solar energy to condense water from the air according to Team X, The Moonshot Factory.

Water harvesting could be achieved in some regions using atmospheric water harvesters (AWHs), which draw clean liquid water out of humid air.

The team has created a geospatial tool called "AWH-Geo" for assessing the potential for atmospheric water harvesting in different world regions. AWH-Geo considered a location's sunlight irradiance, its relative humidity, and its average air temperature. In addition, the tool accounted for annual variations in these parameters.

Based on the use of a hypothetical continuous-mode atmospheric water harvester (SC-AWH), with a harvesting area of $1m^2$ ((10.7 sf) the team calculated that such a device could yield between 0.2–2.5 l of water per kilowatt hour of primary solar energy when operating at a relative humidity range of 30% to 90% and average air temperature of 20 °C.

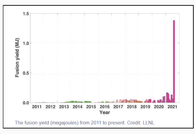
Nuclear Fusion



The fusion yield (megajoules) from 2011 to present. Credit: LLNL

A record yield of more than 1.3 megajoules (MJ) from fusion reactions was achieved in the laboratory for the first time during an experiment at Lawrence Livermore National Laboratory's (LLNL) National Ignition Facility (NIF). The NIF procedure involves precise guiding, amplifying, reflecting, and focusing 192 powerful laser beams into a target about the size of a pencil eraser in a few billionths of a second. Temperatures in the target of more than 180 million F and pressures of more than 100 billion Earth atmospheres are generated. Those extreme conditions cause hydrogen atoms in the target to fuse and release energy in a controlled thermonuclear reaction. This experiment produced fusion yield of roughly two-thirds of the fuel energy that was delivered, tantalizingly close to the goal of fusion yield being greater than laser energy delivered.

- https://phys.org/news/

Notes:
1 ***joule*** *= unit of work or energy in the International System of Units (SI); it is equal to the work done by a force of one newton acting through one meter. In electrical terms, the joule equals one watt-second—i.e., the energy released in one second by a current of one ampere through a resistance of one ohm.*

The Reads

Covid denial to climate denial: How conspiracists are shifting focus. It's part of a larger pattern. Anti-lockdown and anti-vaccine Telegram groups, which once focused exclusively on the pandemic, are now injecting the climate change debate with the same conspiratorial narratives they use to explain the pandemic.

- https://www.bbc.com/

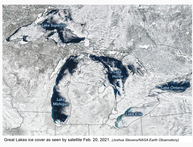
Targets for 2030 remain totally inadequate: the current 2030 targets1 (without long-term pledges) put us on track for a 2.4°C temperature increase by the end of the century. Since the April 2021 Biden Leaders' Summit, our standard "pledges and targets" scenario temperature estimate of all NDCs and submitted or binding long-term targets has dropped by 0.3°C to 2.1°C, but this improvement is due primarily to the inclusion of the US and China's net zero targets, now that both countries have submitted their long-term strategies to the UNFCC

- https://climateactiontracker.org/d

Earth's lakes are warming at a feverish pace, with the Great Lakes leading the way.

The Great Lakes, which supply water for more than 30 million people, were among the fastest-warming lakes in the study. Lake Superior was the fastest, losing nearly two months of ice cover per century. Lake Michigan also experienced rapid warming and more ice-free years.

Lake Superior is warming up three times as fast as the global average, which is around 0.61 degrees (0.34 Celsius) per decade.



Great Lakes ice cover as seen by satellite Feb. 20, 2021. (Joshua Stevens/NASA Earth Observatory)

The New York Solar Energy Society (NYSES)

a chapter of the American Solar Energy Society (ASES)

prepares consumer knowledge handouts about energy conservation and renewable energy and distributes Green Energy Times, a resource publication, to the public throughout eastern New York State. NYSES analyses legislation and state programs and visits with the staff of legislators in New York City, New York State and in Washington, DC.NYSES **NYSES is a volunteer, grassroots, membership organization serving the children, families, engineers, architects and teachers of New York State since 2007.**

Our Mission:
To encourage the understanding and use of solar energy technologies through public outreach, to be a source of sound technical knowledge and to provide a forum to address critical regional and state issues relating to solar energy solutions. We address the energy usage of all segments of society by increasing awareness of the benefits of renewables: solar, wind, biomass, geothermal ground source, tidal/wave energy and energy efficiency.
